Note for installing a single user licence for Xpress-MP

Single user version

Starting with Release 2005 of Xpress-MP a new licensing system is used. The big advantage is that there is no longer a need to run a licence manager on your computer. When you have acquired a licence for Xpress-MP Dash will provide you with a dongle for a USB-port (or a machine specific authorization, whichever you have chosen) and a licence file called xpauth.xpr. If you use a dongle, put it into an USB-port of your computer.

We advise you to completely uninstall any previous version of T-ARGUS before installing a new version. Then install T-ARGUS completely (using the INSTALL.BAT). This procedure will first install the drivers for Xpress-MP and then T-ARGUS.

After completion of the installation you must copy the file <code>xpauth.xpr</code> into the <code>t-ARGUS</code> directory which by default will be "C:\Program Files\TauARGUS". (To check this, ensure that the file <code>tauargus.exe</code> can be found there.)

When you first run T-ARGUS go to the options window (Help|Options). (see next page). This is the place to inform T-ARGUS that you will be using Xpress-MP. Select Xpress as your solver. T-ARGUS will remember this setting so you only have to do it once.

This should complete the installation. For further questions please contact Anco Hundepool (<u>ahnl@rnd.vb.cbs.nl</u>).

If you need to use the network version of XPress see the separate information note on the CASC website.
